ABOUT ME

I am an enthusiastic AI engineer. I'm open to working on AI projects like generative AI, open AI, and AI for manufacturing. I've used Python to create and train machine learning models.

I'll develop projects for actual companies and learn about new technology. I'll use AI to meet your expectations and increase productivity.

PROJECTS

Surface Defect Detection on Hot-Rolled Steel Strips

This project is a Streamlit web application for detecting surface defects in hot-rolled steel strips using a Convolutional Neural Network (CNN). It provides features such as user login, prediction history with SQLite, and PDF report export functionality.
